60-84% Susceptible

<60% Susceptible

• Due to the presence of inducible beta-lactamases, this organism should be considered resistant to the antimicrobial indicated

Shaded boxes indicate organism/antimicrobial combines not tested routinely

Denotes manufacturer reporting limitation

(a) Data with fewer than 30 isolates has poor statistical validity.

(b) Aminoglycoside breakpoints lowered for Enterobacterales and *Pseudomonas aeruginosa* in 2023. Gentamicin is no longer a reliable treatment option for *Pseudomonas aeruginosa*.
